

Venue Booking System — For Administrators

Keeping venues and the timetable accurate, reviewing bookings that need a human decision, managing CRs and fellow Admins, and communicating through notifications and announcements.

Audience Campus Admins & Super Admins · **Covers** Morogoro Main, Dar es Salaam, Tanga, Mbeya · **Companion document** User Manual (Part 1)

CAMPUS SCOPING, IN ONE LINE

As a regular Admin, everything below is automatically limited to your own campus. A Super Admin sees the same screens across all four campuses at once — see §2.12.

2.1 Logging in as Admin

Same login page as everyone else — the system recognizes your account as Admin and takes you straight to the Admin Dashboard instead of the CR one.

2.2 Dashboard

Your at-a-glance view: bookings by status, the most-booked venues, total venues and CRs on your campus (or, for a Super Admin, broken down **by campus**), and a male/female split. Filter by **date range** (today, yesterday, this week, this month, or all time) and by **semester**. Stat cards are clickable shortcuts straight into the filtered list behind them.

2.3 Managing venues

Open **Venues** to see, search, and filter every venue on your campus.

Adding a venue

Name / Code	How it's identified — code is optional but must be unique if set.
Building, Faculty	Optional location context.
Capacity, Type	Lecture Hall, Laboratory, Seminar Room, Hall, or Other.
Blocked Purposes	Purposes this venue should never be booked for (e.g. no Meetings in a lab).
Restricted Levels / Dept.	Limit who's allowed to book it — e.g. Masters-only, or one department only.

Edit or delete a venue from the same list at any time. Deleting only removes the venue record — any booking history tied to it is preserved separately.

2.4 Importing the timetable

Two ways to load the official lecture schedule for a semester, both on the Venues page:

From a link

Paste the Mzumbe timetable URL for your campus and semester — the system fetches it directly, creating any venues it doesn't already know about along the way.

From a CSV file

Upload a spreadsheet with columns for day, time, venue, course, lecturer, and program — useful when a link isn't available.

ADD VS. REPLACE

Add layers the new schedule on top of what's there (matching entries are skipped). **Replace** clears the existing schedule for that semester and campus first — use it when re-importing a corrected file, not when adding a second batch.

Clearing a timetable

Wipes the schedule for one semester and campus, and removes venues auto-created for it that are no longer needed — venues still used in another semester, or with real CR bookings, are kept automatically.

2.5 Reviewing bookings

Open **Bookings**. Tabs across the top — Pending, Approved, Rejected, Cancelled, All — each show a live count.

- **Search** live by venue name, CR name, time, purpose, or booking reason.
- A booking with a **View Reason** tag was a CR's 3rd-or-later booking that day — open it to read their full explanation before deciding, at any time, even after you've already approved it.
- **Approve** a pending booking directly, or **Reject** with a short reason the CR will see. Either way, the CR is notified immediately.
- **Delete** removes a single booking permanently; **Delete All** does the same for every booking matching your current filter — both irreversible.
- **Download Report** generates a PDF of bookings matching your current Status filter. Optionally pick a specific **date** next to it, for a report scoped to just that day.

2.6 Booked Venues

A read-focused view of what's occupying venues: **Booked Venues for a Specific Day** (a card per booking, including the CR's signature) or **Booked History (All)** as a table. Same status filter and live search as Bookings.

2.7 Semesters

Create a semester with its name, academic year, semester number, and start/end dates. **Activate** the current one — only one semester is active at a time, and it's what Find Venue and the timetable import screens use by default.

2.8 Managing CRs

Open **Students (CR)**. Filter by Campus, Faculty, Department, Program, Level, Year, or Sex, plus free-text search — the count of matching CRs updates live.

- **Add CR** — register one CR at a time, the same Reg No/manual-email choice as self-registration.
- **Import CSV** — register many at once; download the template first. Rows with a duplicate or invalid Reg No are skipped and listed, not silently dropped.
- **Edit** — update any detail, including their Reg No if it was entered incorrectly; if you change their name or Reg No and they have one set, their email is regenerated and they're notified.
- **Remove** — a soft removal: personal details are cleared and they show as "Deleted CR #id" going forward, but their full booking history is kept for records.
- **Print List** — a PDF of exactly the CRs your current filters show.

Each CR's Campus badge is color-coded, so mixed lists stay easy to scan.

2.9 Managing admins

Open **Admins** — visible to Super Admins only. Add a new Admin with a name, email, password, and a required Campus — the one campus they'll manage from then on. Editing lets you reassign their Campus. Removing an Admin is available to any Super Admin, for any Admin except one — see §2.12.

2.10 Activity logs

Open **Logs** for a running record of what's happened: logins, bookings, approvals, edits. Filter by action type, and delete a single entry or everything matching the current filter.

WHAT EACH ROLE CAN SEE

CR and regular-Admin actions are visible to every Admin. A Super Admin's own actions are visible only to that Super Admin — not to other Admins.

2.11 Settings & branding

Any Admin can set the **Main System Color** and upload an **App Logo**, and configure **Study Unit Booking Hours** — the allowed start/end time per day of the week, which every CR's booking form respects. **My Color Preference** here is personal to your own account.

2.12 Super Admin duties

Everything above, across all four campuses at once, plus:

App Branding

Only a Super Admin can set the **App Name** shown on the login page, the university **Support Phone** number, the **Footer Text/Link**, and the **Login Page Background Color**.

Promoting an Admin

When adding or editing an Admin, a Super Admin can tick **Make this a Super Admin** instead of assigning a campus — a promoted Super Admin manages Admins and sees all campuses, but cannot edit, demote, or remove the one **Main Super Admin**, and no Super Admin can remove their own account.

THE MAIN SUPER ADMIN IS PROTECTED

This one account can't be edited, demoted, or removed by anyone but itself, and doesn't appear in anyone else's Admins list. It's the fallback that guarantees the system can never be locked out of.

Database Maintenance

After certain system updates, a one-time setup step is needed on the server. Under **Settings -> Database Maintenance**, press **Run Database Migrations** to apply it. Use this if something that used to work suddenly shows a server error right after an update.

2.13 Notifications

The bell icon in the top bar shows how many notifications you haven't read yet, as a number. Click it to open your **Notifications** page, which has two tabs.

Inbox

- **Booking Pending** — a CR on your campus has requested a 3rd-or-later booking that day and needs your decision. Click it to jump straight to the **Pending** tab on Bookings, ready to approve or reject.
- **Announcement** — something another Admin on your campus (or a Super Admin) has broadcast.

Filter your Inbox by **type**, **read/unread** status, a specific **date**, or search by keyword. Click any notification to mark it read and reveal its full message, or use **Mark all as read** to clear everything at once.

Announcements tab

Shows every announcement posted by any Admin on your campus (all campuses, for a Super Admin), each with who posted it, how many people received it, and how many have read it so far. You can **Edit** or **Delete** your own posts at any time from here — editing updates the message for everyone who already has it, deleting removes it from their notifications entirely. You can see, but not edit or delete, an announcement posted by a colleague.

2.14 Posting an announcement

Press **New Announcement** from the Notifications page.

Audience

Choose who it goes to:

- **CRs** — goes to CRs on your campus (a Super Admin may pick a specific campus, or leave it as **All Campuses**). Optionally narrow it further by **Faculty**, **Department**, **Program**, **Level**, or **Year of Study** — leave any of these blank to reach everyone in that campus. Faculty/Department/Program can be chosen from the list or typed if not listed.
- **Admins** — goes directly to every other Admin, as a plain notification (not shown on the Announcements tab as belonging to a campus, since it isn't a CR broadcast).

After sending, you'll see how many people it reached. It then appears in your Announcements tab, ready to edit or delete whenever needed.

§ Roles & permissions, at a glance

CAN DO THIS...	CR	ADMIN	SUPER ADMIN
Book a venue on their own campus	Yes	—	—
Approve / reject bookings	—	Own campus	Any campus
Add / edit venues & timetable	—	Own campus	Any campus
Add / edit / remove CRs	—	Own campus	Any campus
Add / edit / remove Admins	—	—	Yes*
Post an announcement to CRs	—	Own campus	Any campus
Post an announcement to Admins	—	Yes	Yes
Edit / delete an announcement	—	Own posts only	Own posts only**
Change App Name, Support Phone, Login branding	—	—	Yes
Run database migrations	—	—	Yes

*Except the Main Super Admin, who cannot be edited, demoted, or removed by anyone else. **Even a Super Admin cannot edit or delete an announcement posted by another Admin — only its own author can.

§ Troubleshooting

"A CR says they can't book a venue that looks free."

Check Booked Venues for that day/venue — an official timetable slot or another pending booking may already occupy it.

"Adding/editing something suddenly shows a server error."

A recent update may need a one-time database step — go to Settings -> Database Maintenance -> Run Database Migrations (Super Admin only, §2.12).

"I can't find a particular Admin in the list."

If it's the Main Super Admin, that's expected — their account is intentionally hidden from everyone else, by design.

"Why can't I edit this announcement?"

Only the Admin who originally posted it can edit or delete it — even a Super Admin can only manage their own. You can still read it, and see how many people it reached, from the Announcements tab.
